DOTS and BARS: Detectable Warnings for Pedestrian Facilities

Wednesday, July 27, 2022
1:00-2:30 p.m.
Technical Assistance Webinar

The technical assistance workshop is based on current research on the application of detectable warnings, such as bars and trapezoidal delineators, for pedestrians with low vision or who are blind. These devices are used to communicate information to the pedestrian about the environment, e.g. bicycle facilities or a transit stop. The webinar will provide an overview of current ODOT design standards and current best practices.

The webinar is designed for those who work in the transportation and transit field including traffic engineers, technicians, and transportation design professionals who want to gain an understanding of the use of delineators in the design of pedestrian and multi-use path facilities. Attendance at the webinar is limited so that there can be active discussion and dialogue on the specific topic of detectable warnings.

INSTRUCTIONAL STAFF

Taundra Mortensen, P.E, ACTCP Senior ADA Standards Engineer, ODOT

SCHEDULE

Wednesday, July 27, 2022 from 1:00-2:30 pm.

COURSE LOCATION

Webinar format using Zoom

ENROLLMENT

Register online as soon as possible. Since the class size is restricted, an additional session may be offered.
